## Fusion Bar Upgrade

Upgrading your fusion bar will reduce friction on the trim line and mini fifth line. This will make trimming the bar easier.

### Required Materials:

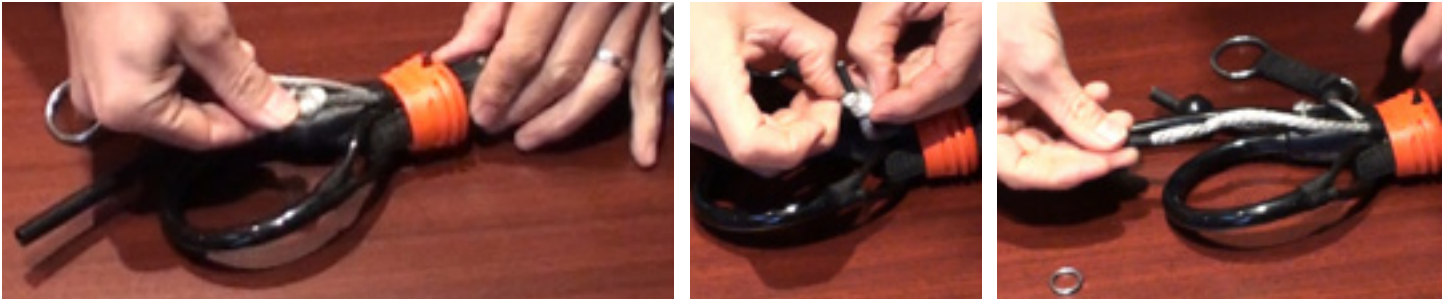

1. Fusion Bar
2. Replacement Ring

Contact your local Ocean Rodeo dealer for your free upgrade ring.

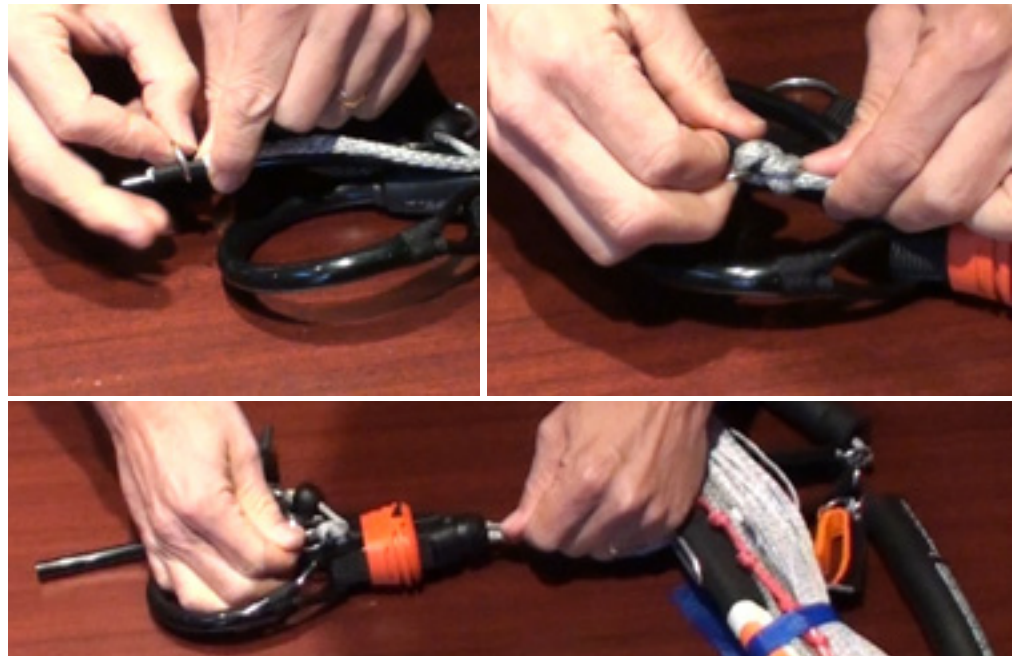

**Step 1:** Untie the knot at the end of the trim line.

*If you have been using the line for a while, you may need to use pliers to help loosen the knot.*

**Step 2:** Slide on the replacement ring, and tie it in place with a figure-8 knot. Pull the trim line tight to secure it.

**Step 3:** Slide the stopper ball up on the mini fifth line, and untie the knot. Pull the line through the trim loop body.

**Step 4:** Thread the line through the ring and slide on the stopper ball.

**Step 5:** Tie the mini fifth line on to the small ring of the leash attachment with a bowline knot.

**Step 6:** Slide the stopper ball over the knot.

The mini fifth line now has free range of motion, and friction on the trim line has been removed.
